

AVENTUS

About Company

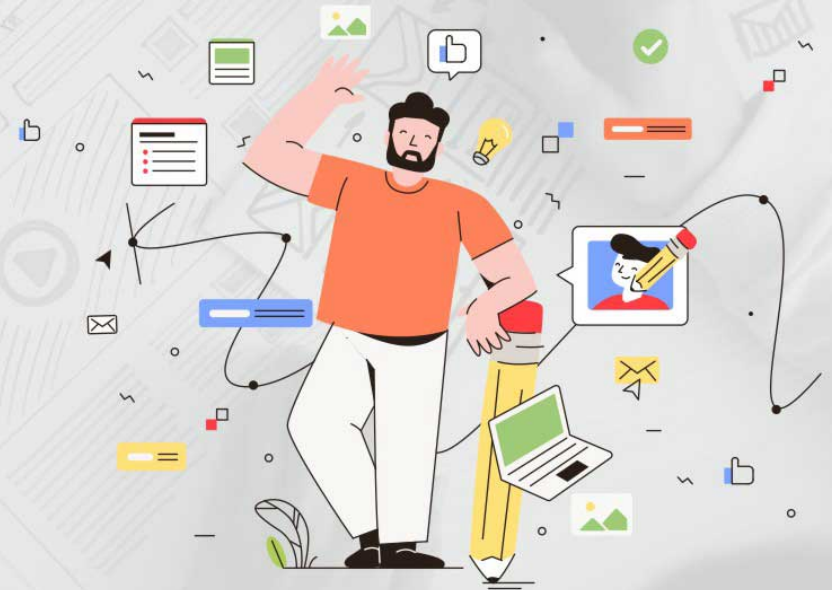

Aventus is a software development and services company based in India and UK. Software, Web and Mobile Development & Maintenance of applications is our forte. We have a very good experience in Manual/Automation/Security/API Testing as well. Our defining feature is an unflinching desire to make Aventus an all-under-one-roof shop for customers' software development and testing needs. We bring in collective industry experience of end-to-end outsourced product development. We lay stress on building an enduring relationship with our clients. Organizations' technology roadmap and delivery excellence receive special attention too. We inculcate leadership skills by guiding the team of professionals to deliver quantified, qualitative client deliverables within budget while adhering to timeframes.

Aventus –The Capability Overview

- 01 UX/UI Development**
- 02 Mobile Development**
- 03 Quality Engineering Service**
- 04 Specialized Quality Engineering Service**
- 05 Start-up Studio**

01. UX/UI Development

- Software Development
- Web Application Development
- Ecommerce Development
- Maintenance of the Application.
- Wireframe Design
- Prototype Design

02. Mobile Development

- Enterprise Mobility
- IOS Development
- Android Development
- Cross Platform Development

03. Quality Engineering Service

- Manual Functional Testing
- API Testing
- System / Integration Testing
- User Acceptance Testing (with Business)
- Testing Transformation

04. Specialized Quality Engineering Service

- Functional Automation Testing
- Performance/Load/Stress Testing
- Security Testing
- Mobile Testing
- Continuous Testing (DevTestOps)

05. Start-up Studio

- UI/UX Consulting (Persona Building)
- Technology Partnership
- Quality Engineering Services
- Digital Marketing

Development Methodology

01 Agile Software Development / Scrum Methodology

02 Waterfall Model

01. Agile Software Development / Scrum Methodology:

- Dedicated team assigned to each project
- Different team configuration depending on each need
- Aventus resources embedded in the client team (mixed team)
- Sprint Duration: (2 week to 4 week)

- Sprint Planning
- Daily Stand-up / Scrum Meeting
- Sprint Demo
- Sprint Retrospective
- Back Log Refinement

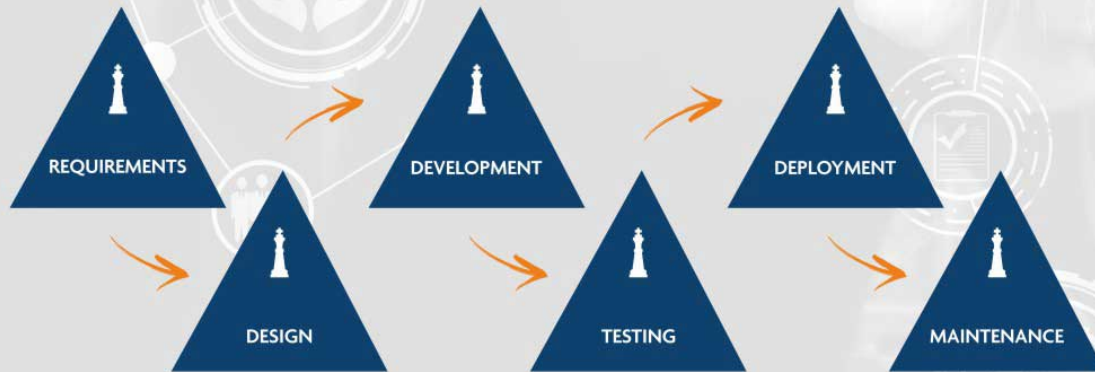

01. Agile Software Development / Scrum Methodology:

02. Waterfall Model

The waterfall model is a sequential design process in which progress is seen as flowing steadily downwards (like a waterfall) through the phases of Conception, Initiation, Analysis, Design, Construction, Testing, Production/Implementation, and Maintenance.

Working Model

OFFSHORE Development

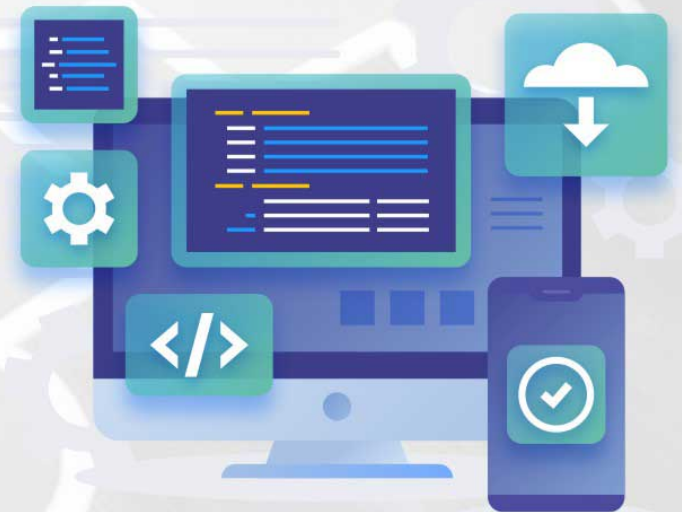

Building up an Offshore Development Team (ODT) is gaining ground when businesses want to reduce cost of operation and increase productivity. We have the expertise to setup ODT and provide services to a huge variety of businesses. Our model is based on assembling the right development team keeping in mind the requirements of your project. To function according to your specific software development needs and preferred engagement model.

Working Model

ONSHORE Development

IT development services were traditionally delivered offshore –in places such as India, Europe and so on. But an uptick in demand has resulted in use of more refined service delivery models –including the use of onshore and/or near-shore locations. With a stabilizing market for IT development, there is no longer a restriction to cost-saving benefits –as a greater number of clients accept that the use of onshore service delivery model brings efficiencies, value addition and Quicker delivery of high-quality services. Our onshore service delivery models are remote services delivered by our developers based in your local country and time zone.

**Great Job**
★★★★★ Reviewed 5 months ago by ESTRIDE Media
I would like to thank the Aventus Software team for all of your hard work and continued support during the development, UAT, and deployment of the Product. The site is beautifully designed, yet functional for our business needs as well. This site is a great first step forward for where we would like to go as an organization with our business applications and technology, specifically in the Business Development area.

Working Model

HYBRID Development

As the name suggests, Hybrid Delivery Model is a unique amalgamation of both, Onshore as well as offshore models. The benefit of this model is that the client has the liberty of establishing a whole team offshore. Then, they can move the whole team or some of the members on-site to make the operation smooth and swift. They have the option to do this at any stage of the project as per need.

Project Engagement Model

Fixed Price

The FP engagement model is the classic approach in the development life cycle. As the name suggests – You get a fixed price and you don't pay anything more than that. Scope of changes on requirement is very less in this model.

Time & Material

The T&M model means that the client is engaged with the project on regular basis. We update client on daily basis. We charge hourly rate in this model. This Model works well when the length of project is not specified.

Dedicated Team

It's very simple, you hire a team from your IT partner and then you pay a set monthly fee, based on the agreed protocol. This is the most controlled way of executing the project and you will get selected professionals who work as your own employee. We take complete responsibility of the project and update the client on regular basis about the project progress.

Value Proposition for Our People

- We believe that Aventus is a great place to learn and grow professionally.
- Work with new technologies
- Best practice in software, web and mobile development as well as Testing
- Environment our people that facilitates learning and collaboration
- We believe in long term relationship with
